CHAPTER 1: NUMBER

In Words: place value of figures required.

Th H T U
4 5 7 6 9

forty five thousand, seven hundred and sixty nine.

Reading Scales:

each division 10

each division 200

CALCULATIONS:

$$\begin{array}{r} \text{Th H T U} \\ 837 \\ + 962 \\ + 549 \\ \hline 2348 \\ \hline \text{2 1 1} \end{array}$$

$$5 \overline{) 135} \\ \underline{617} \\ 675$$

$$\begin{array}{r} \text{Th H T U} \\ \cancel{8}^1 \cancel{4}^7 \cancel{8}^1 3 \\ - 5769 \\ \hline 3714 \end{array}$$

$$\begin{array}{r} 534 \\ \times 6 \\ \hline 3204 \\ \hline \text{3 2 2} \end{array}$$

POWERS

index \rightarrow
base \rightarrow $a^n = a \times a \times \dots \times a$ to n terms

" 2 to the power of 5 "

$$(i) 2^5 = 2 \times 2 \times 2 \times 2 \times 2 = 32$$

$$(ii) 2^7 = 2^5 \times 2 \times 2 = 32 \times 2 \times 2 = 128$$

$$(i) 2^3 \\ = 2 \times 2 \times 2 \\ = 8$$

$$(ii) (7 - 3)^2 \\ = 4^2 \\ = 4 \times 4 \\ = 16$$

$$(iii) 7^2 - 3^2 \\ = 7 \times 7 - 3 \times 3 \\ = 49 - 9 \\ = 40$$

EVALUATE EXPRESSIONS

Replace the letter by its value.

$$a = 2, b = 3, c = 5$$

$$(1) b^2 - a^3 \\ = b \times b - a \times a \times a \\ = 3 \times 3 - 2 \times 2 \times 2 \\ = 9 - 8 \\ = 1$$

$$(2) ac^2 \\ = a \times c \times c \\ = 2 \times 5 \times 5 \\ = 2 \times 25 \\ = 50$$

$$(3) (ac)^2 \\ = (a \times c)^2 \\ = (2 \times 5)^2 \\ = 10^2 \\ = 100$$

SQUARE ROOT

Square and square root
are inverse processes.

$$3^2 = 9$$
$$\sqrt{9} = 3$$

ROOTS 1 , 2 , 3 , 4 , 5 , 6 , 7 , 8
SQUARES 1 , 4 , 9 , 16 , 25 , 36 , 49 , 64

approximation: $\sqrt{40}$ lies between 6 and 7.

Solve Equations:

(i) $x^2 = 36$	(ii) $\sqrt{x} = 6$
$x = \sqrt{36}$	$x = 6^2$
$x = 6$	$x = 36$

SUM (add)	$12 + 4 = 16$
DIFFERENCE (subtract)	$12 - 4 = 8$
PRODUCT (multiply)	$12 \times 4 = 48$
QUOTIENT (divide)	$12 \div 4 = 3$

MULTIPLE: a product by multiplying by an integer.

multiples of 6: 6 , 12 , 18 , 24 ...

multiples of 8: 8 , 16 , 24 , 36 ...

common multiples: 24 , 48 ...

lowest common multiple: 24 LCM = 24

FACTOR: pairs multiply to give the number.

$$12: \quad 1 \times 12 = 2 \times 6 = 3 \times 4$$

factors of 12: 1, 2, 3, 4, 6, 12

factors of 18: 1, 2, 3, 6, 9, 18

common factors: 1, 2, 3, 6

highest common factor: 6 HCF = 6

PRIME NUMBER: has exactly 2 factors, itself and 1.

2, 3, 5, 7, 11, 13, 17... **Note: 2 is the only even prime**

PRODUCT OF PRIME FACTORS:

factors of 12: 1, 2, 3, 4, 6, 12

prime factors of 12: 2, 3

product of prime factors: $12 = 2 \times 2 \times 3$

divide successively by primes
to reduce the number to 1.

2	240
2	120
2	60
2	30
3	15
5	5
	1

$$\begin{aligned} 240 &= 2 \times 2 \times 2 \times 2 \times 3 \times 5 \\ &= 2^4 \times 3 \times 5 \quad \text{INDEX FORM} \end{aligned}$$

DIRECTED NUMBERS

Add and Subtract

$$a + (-b) = a - b$$

$$a - (-b) = a + b$$

(i) $7 + (-3) = 7 - 3 = 4$

(iii) $6 - (-2) = 6 + 2 = 8$

(ii) $-5 + (-1) = -5 - 1 = -6$

(iv) $-3 - (-5) = -3 + 5 = 2$

Multiply and Divide

P	x or ÷	P	=	P
N	x or ÷	N	=	P
P	x or ÷	N	=	N
N	x or ÷	P	=	N

$$-3 \times (-6) = 18 \quad -18 \div (-6) = 3$$

$$3 \times (-6) = -18 \quad 18 \div (-6) = -3$$

$$-3 \times 6 = -18 \quad -18 \div 6 = -3$$

ORDER OF CALCULATION

x and ÷ before + or -
change the order with brackets:
BRACKETS FIRST!

$$\begin{aligned} \text{(i)} \quad & -6 + 4 \times (-3) \\ & = -6 + (-12) \\ & = -18 \end{aligned}$$

$$\begin{aligned} \text{(ii)} \quad & (-6 + 4) \times (-3) \\ & = -2 \times (-3) \\ & = 6 \end{aligned}$$

EVALUATE EXPRESSIONS

Replace the letter by its value.

$$a = -2, b = 3, c = -5$$

$$\begin{aligned} \text{(1)} \quad & 5ab \\ & = 5 \times a \times b \\ & = 5 \times (-2) \times 3 \\ & = -30 \end{aligned}$$

$$\begin{aligned} \text{(2)} \quad & b^2 + ac \\ & = b \times b + a \times c \\ & = 3 \times 3 + (-2) \times (-5) \\ & = 9 + 10 \\ & = 19 \end{aligned}$$

$$\begin{aligned} \text{(3)} \quad & \frac{c - b}{c + b} \\ & = \frac{-5 - 3}{-5 + 3} \\ & = \frac{-8}{-2} \\ & = 4 \end{aligned}$$

$$\begin{aligned} \text{(4)} \quad & a(b + c) \\ & = a \times (b + c) \\ & = -2 \times (3 + (-5)) \\ & = -2 \times (-2) \\ & = 4 \end{aligned}$$

$$\begin{aligned} \text{(5)} \quad & 2c^2 \\ & = 2 \times c \times c \\ & = 2 \times (-5) \times (-5) \\ & = 2 \times 25 \\ & = 50 \end{aligned}$$

$$\begin{aligned} \text{(6)} \quad & (2c)^2 \\ & = (2 \times c)^2 \\ & = (2 \times (-5))^2 \\ & = (-10)^2 \\ & = 100 \end{aligned}$$

CHAPTER 2: DECIMALS

READING SCALES

DECIMAL PLACES

the number of figures after the decimal point.

ROUNDING

(i) $12.\overset{\downarrow}{6}49$ (3DP) $\begin{cases} 12.7 \\ \text{-----} 12.65 \\ 12.6 \end{cases}$
= 12.6 (1DP)

(ii) $3.\overset{\downarrow}{6}851$ (4DP) $\begin{cases} 3.69 \\ \text{-----} 3.685 \\ 3.68 \end{cases}$
= 3.69 (2DP)

SIGNIFICANT FIGURES

Indicate the accuracy of a measurement.

eg. 3400 cm = 34 m = 0.034 km

Same measurement, same accuracy: each 2 significant figures

Count the number of figures used but **not** zeros:
at the **end** of a **whole** number,
at the **start** of a **decimal**.

These zeros simply keep the place value of the digits.

Examples:

0.030 2 sig fig

30100 3 sig fig

5.030 4 sig fig

30100.0 6 sig fig

ROUNDING:

Round to the place value of the number of significant figures required

Examples: rounding to 2 significant figures.

$$(i) \begin{array}{ccccccc} & \text{TH} & \text{H} & \text{T} & \text{U} & + & \\ (i) & 5 & 7 & 5 & 1 & . & 4 = 5800 \end{array} \quad \text{nearest HUNDRED}$$

↑

$$(ii) \begin{array}{ccccccc} & \text{U} & + & \text{h} & \text{th} & & \\ (ii) & 0 & . & 0 & 5 & 7 & 514 = 0.058 \end{array} \quad \text{nearest THOUSANDTH}$$

↑

NOTE: 0.058000 is wrong

ADD and SUBTRACT
remember place value

(i) $8.37 + 9.6 + 5.49$

	T	U	t	h
	8	.	3	7
			9	6
+	5	.	4	9
	2	.	3	4
	6			
	2		1	1

(ii) $9.48 - 5.764$

	U	t	h	th
	9 ⁸	.	4 ¹	8 ⁷
			1	0 ¹
-	5	.	7	6
	4			
	3	.	7	1
			6	6

MULTIPLY and DIVIDE

(i) 4.547×6

4	.	5	4	7
			x	6
2	7	.	2	8
			2	2
	3		2	4

(ii) $27.282 \div 6$

0	4	.	5	4	7
6	2	7	.	2	8
	2	8	2	4	2

multiply by 10s

$$(i) \quad 3.\overset{\curvearrowright}{4}\overset{\curvearrowright}{2} \quad \times \quad 10 \quad = \quad 34.2$$

$$(ii) \quad 5.\overset{\curvearrowright}{8}\overset{\curvearrowright}{7} \quad \times \quad 100 \quad = \quad 587$$

$$(iii) \quad 0.\overset{\curvearrowright}{0}\overset{\curvearrowright}{6}2 \quad \times \quad 100 \quad = \quad 6.2$$

divide by 10s

$$(i) \quad 3\overset{\curvearrowleft}{4}.\overset{\curvearrowleft}{2} \quad \div \quad 10 \quad = \quad 3.42$$

$$(ii) \quad 5\overset{\curvearrowleft}{8}\overset{\curvearrowleft}{7}.\quad \div \quad 100 \quad = \quad 5.87$$

$$(iii) \quad 0\overset{\curvearrowleft}{0}\overset{\curvearrowleft}{6}.\overset{\curvearrowleft}{2} \quad \div \quad 100 \quad = \quad 0.062$$

$$(1) \quad 3.\overset{\curvearrowright}{1}\overset{\curvearrowright}{2} \quad \div \quad 0.\overset{\curvearrowright}{0}\overset{\curvearrowright}{0}\overset{\curvearrowright}{3}$$
$$= 3 \ 120 \quad \div \quad 3$$
$$= 1 \ 040$$

remove decimal
point from divisor:
multiply both
numbers by 1000

$$(2) \quad 3.12 \quad \div \quad 3000$$
$$= \overset{\curvearrowleft}{1}.\overset{\curvearrowleft}{0}\overset{\curvearrowleft}{4} \quad \div \quad 1000$$
$$= 0.00104$$

divide by 3
then by 1000

$$(3) \quad 3.\overset{\curvearrowright}{1}\overset{\curvearrowright}{2} \quad \times \quad 3000$$
$$= 3 \ 120 \quad \times \quad 3$$
$$= 9 \ 360$$

multiply by 1000
then by 3

CALCULATOR:

Read and decide the operation(s) required + , - , x , ÷
Write the calculation(s).

(1) Carpet costs £24.52 per m². Calculate the cost of 18.5 m².
 $£24.52 \times 18.5 = £453.62$

(2) 4.8 litres of paint covers 58.8 m².
How many m² per litre ? $58.8 \div 4.8 = 12.25 \text{ m}^2$

(3) On a diet John drops from 105.4 kg to 96.8 kg.
How much weight did he loose ?
 $105.4 - 96.8 = 8.6 \text{ kg}$

FOREIGN EXCHANGE

EXCHANGE RATE: amount of foreign currency for £1.

$$\boxed{£1 = \$1.48}$$

Change £30 to \$ $\$30 \times 1.48 = \underline{\underline{\$44.40}}$

Change \$250 to £
 $£250 \div 1.48$
 $= £168.91891\dots$
 $= \underline{\underline{£168.92}}$

STANDARD FORM (SCIENTIFIC NOTATION)

Used to write very large and very small numbers.

Form $a \times 10^n$

$1 \leq a < 10$

ie. between 1 and 10, excluding 10

n is an INTEGER

ie. ...-3,-2,-1,0,1,2,3...

Place the decimal point after the first non-zero digit.
Count the number of places the decimal point moves.

$$257000 = 2.57 \times 10^5$$

2 5 7 0 0 0 .

negative power - small number between 0 and 1,
the point moves to the right.

$$0.0000257 = 2.57 \times 10^{-5}$$

0 . 0 0 0 0 2 5 7

CHAPTER 3: ANGLES

NAMING ANGLES: 3 capital letters and an angle sign
the middle letter is the VERTEX.

arms: AB and BC
vertex: B
angle: $\angle ABC$

COMPLETE TURN:
360° around a point

$$\begin{array}{r}
 70 \\
 85 \\
 75 \\
 + 90 \\
 \hline
 320 \\
 \hline
 \end{array}
 \qquad
 \begin{array}{r}
 360 \\
 - 320 \\
 \hline
 40 \\
 \hline
 \alpha = 40
 \end{array}$$

DESCRIPTIONS (TYPES):

acute angle:
between 0° and 90°

right angle:
90°

obtuse angle:
between 90° and 180°

straight angle:
180°

Reflex angle: between 180° and 360°

supplementary

complementary

vertically opposite
(X shape)

PARALLEL LINES:

corresponding angles equal
(F shape)

alternate angles equal
(Z shape)

$a = 50$ corresponding (F shape)

$b = 50$ alternate (Z shape)

$c = 50$ vertically opposite
(X shape)

$d = 130$ supplementary

	180
-	50
	<u>130</u>

CHAPTER 4: ALGEBRA

SHORT FORMS

multiplication is repeated addition

$$(i) \quad 7 + 7 + 7 + 7 + 7 + 7 = 6 \times 7$$

$$(ii) \quad a + a + a + a + a + a = 6 \times a = 6a$$

$$(iii) \quad a^2 + a^2 + a^2 + a^2 + a^2 + a^2 = 6 \times a^2 = 6a^2$$

a power is repeated multiplication

$$(i) \quad 7 \times 7 \times 7 \times 7 \times 7 \times 7 = 7^6$$

$$(ii) \quad a \times a \times a \times a \times a \times a = a^6$$

"Like Terms" can be added/subtracted.
(same letter combinations)

$$\begin{array}{lll} (1) \quad 5a - 2b + 3a & (2) \quad 5ab - 2ba + ab & (3) \quad 7a^2 - 4a - 6a^2 \\ = 5a + 3a - 2b & = 5ab - 2ab + 1ab & = 7a^2 - 6a^2 - 4a \\ = 8a - 2b & = 4ab & = a^2 - 4a \end{array}$$

Multiplication combines letters and numbers.

$$\begin{array}{ll} (4) \quad 2a^2 \times 4ab & (5) \quad 3c^2 \times 2c - 5 \times c \times c \times d \\ = 2 \times a \times a \times 4 \times a \times b & = 6c^3 - 5c^2d \\ = 2 \times 4 \times a \times a \times a \times b & \\ = 8a^3b & \end{array}$$

BRACKET BREAKING

$$a \times (b + c) = a \times b + a \times c$$

multiply each term in the brackets

$$\begin{aligned} (1) \quad & 6(2w - 3y) \\ & = 12w - 18y \end{aligned}$$

$$\begin{aligned} (2) \quad & 8p(2p + r) \\ & = 16p^2 + 8pr \end{aligned}$$

remove brackets then simplify:

$$\begin{aligned} (3) \quad & 2(3p + 5) - 7 \\ & = 6p + 10 - 7 \\ & = 6p + 3 \end{aligned}$$

$$\begin{aligned} (4) \quad & n(4n - 3) + n^2 \\ & = 4n^2 - 3n + n^2 \\ & = 5n^2 - 3n \end{aligned}$$

FACTORISATION

$$a \times b + a \times c = a \times (b + c)$$

To FULLY factorise **a** is the Highest Common Factor

$$\begin{aligned} (1) \quad & 12w - 18y \\ & = 6(2w - 3y) \end{aligned}$$

$$\begin{aligned} (2) \quad & 4n^2 + 5mn - n \\ & = n(4n + 5m - 1) \end{aligned}$$

$$\begin{aligned} (3) \quad & 16p^2 + 8pr \\ & = 8p(2p + r) \end{aligned}$$

$$\begin{aligned} (4) \quad & 1.4 \times 3.6 - 1.4 \times 1.6 \\ & = 1.4 \times (3.6 - 1.6) \\ & = 1.4 \times 2 \\ & = 2.8 \end{aligned}$$

CHAPTER 5: INFORMATION HANDLING 1

AVERAGES:

$$\text{mean} = \frac{\text{total of all results}}{\text{number of results}}$$

median: the middle result of the ordered results

(if an even number of results - find the mean of the middle two results)

mode: the most common result

SPREAD:

range = highest result - lowest result

19,14,15,19,16,22,16,20,24,14,25,18,27,12,16

$$\text{mean} = \frac{277}{15} = 18.466... = 18.5$$

15 ordered results: 8th result in the middle

12,14,14,15,16,16,16,18,19,19,20,22,24,25,27

median = 18

mode = 16

range = 27 - 12 = 15

median for even number of results:

16 ordered results: 8th/9th results in the middle

12,14,14,15,16,16,16,18,19,19,20,22,24,25,27,30

$$\text{median} = (18+19) \div 2 = 18.5$$

MEAN PROBLEMS

Total = mean \times number of results

- (1) 15 girls, mean height 1.2m
10 boys, mean height 1.4m

$$1.2 \text{ m} \times 15 = 18 \text{ m}$$

$$1.4 \text{ m} \times 10 = 14 \text{ m}$$

$$\text{total height} \quad \underline{32 \text{ m}}$$

Find the mean height of
the group of 25 children ?

$$\text{mean} = 32 \div 25 = \underline{\underline{1.28 \text{ m}}}$$

- (2) 4 boys have mean weight 60 kg
When John is included the
mean weight is 62 kg

$$60 \text{ Kg} \times 4 = 240 \text{ Kg}$$

$$62 \text{ Kg} \times 5 = 310 \text{ Kg}$$

$$310 - 240 = \underline{\underline{70 \text{ Kg}}}$$

Find the weight of John.

FREQUENCY TABLES

If there is a lot of data the information is easier to present in a frequency distribution table.

TEST SCORES: 1,1,2,2,2,2,2,3,3,3,3,3,3,4,4,4,5,5

result	tally	frequency
1		3
2		5
3		7
4		3
5		2

MEAN FROM A FREQUENCY TABLE:

A result x frequency column is included.

$$\text{mean} = \frac{\text{total of: result} \times \text{frequency}}{\text{total frequency}}$$

result	frequency	result x frequency
1	3	3
2	5	10
3	7	21
4	3	12
5	2	10
TOTALS	20	56

mean = $56 \div 20$
= 2.8

GROUPED FREQUENCY TABLES

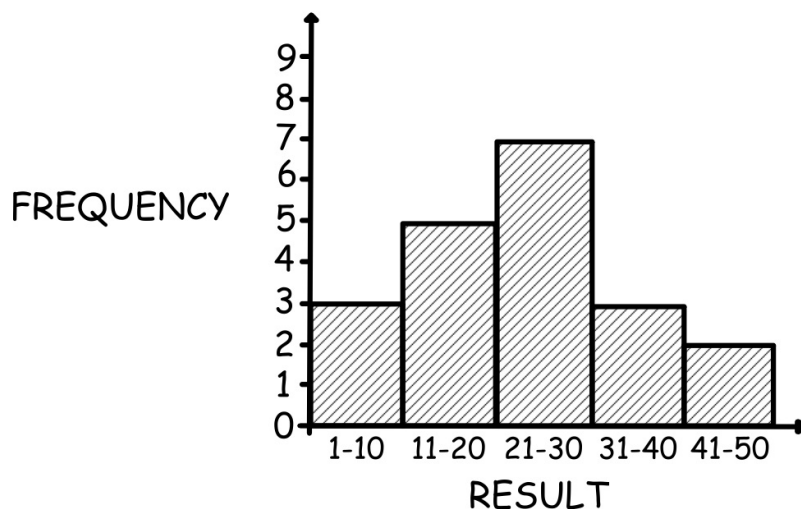

Data can be grouped into class intervals

TEST SCORES: 3,5,8 , 11,13,17,17,19,
22,23,24,25,26,28,29,
33,38,39 , 44,47

result	tally	frequency
1 - 10		3
11 - 20		5
21 - 30		7
31 - 40		3
41 - 50		2

The results can be shown on a frequency diagram.

The **MODAL CLASS** has the highest frequency.

MODAL CLASS is 21-30

CHAPTER 6: TIME and SPEED

CLOCK TIME:

12 hour	6.25 am	6.25 pm	noon	midnight
24 hour	06 25	18 25	12 00	00 00 24 00

Note: 6.25 am is 6hr 25min into the day

6.25 hr is 6hr 15min

(6¹/₄ hr)

TIME DIFFERENCES

(1) 8.25 am to 4.10 pm

08 25 to 09 00	35 min
09 00 to 16 10	<u>7 hr 10 min</u>
	7 hr 45 min

(2) 10.35 pm to 2.20 am

22 35 to 24 00	1 hr 25 min
00 00 to 02 20	<u>2 hr 20 min</u>
	3 hr 45 min

SPEED

$$S = \frac{D}{T}$$

minutes \div 60 = hours

$$D = ST$$

$$T = \frac{D}{S}$$

hours \times 60 = minutes

- (1) Travel 240 miles in 4 hours 10 min.
Find the average speed.

$$S = \frac{D}{T}$$

$$= 240 \div 4.166666666$$

$$= 57.6 \text{ mph}$$

$$10 \div 60 + 4$$

$$240 \div \boxed{\text{ANS}} =$$

- (2) How far is travelled at 36 mph for 4 hours 35 min. ?

$$D = ST$$

$$= 36 \times 4.583333333$$

$$= 165 \text{ miles}$$

$$35 \div 60 + 4$$

- (3) How long does it take to travel 100 miles at 24 mph ?

$$T = \frac{D}{S}$$

$$= 100 \div 24$$

$$= 4.166666666 \text{ hours}$$

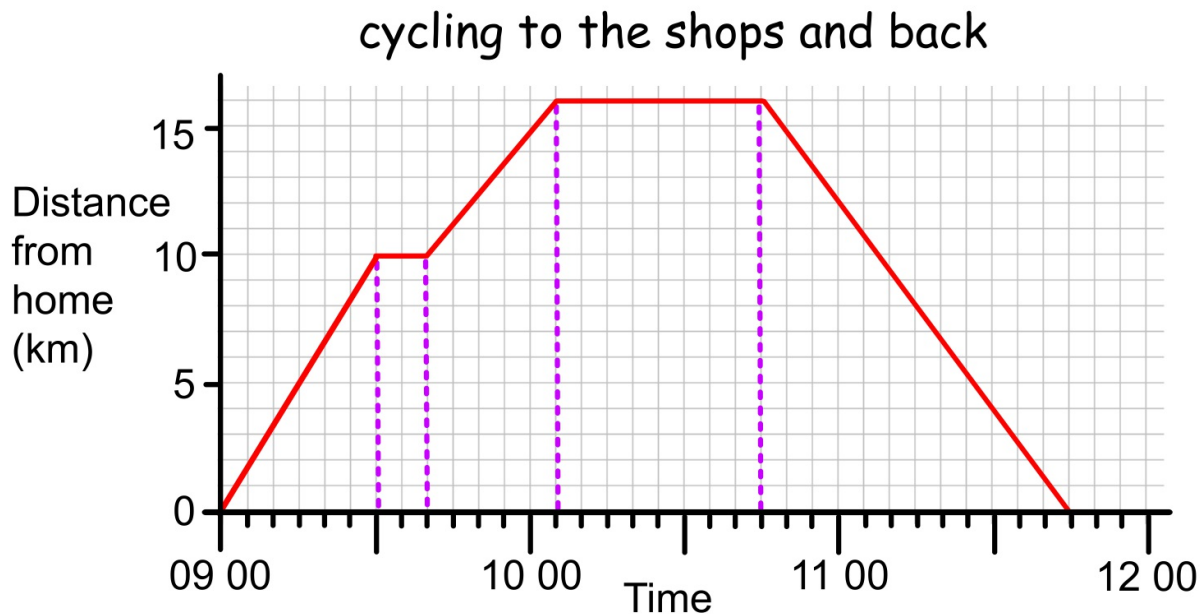

$$= 4 \text{ hours } 10 \text{ min}$$

$$0.1666... \times 60 = 10$$

GRAPHS

For a **distance/time** graph, the **slope** is the **speed**.

The **faster** the speed the **steeper** the graph.

The graph tells a story of the journey:

How far is it to the shops ? 16 km

How long was he shopping ? 8 divisions 40 min
(1 division = $60 \text{ min} \div 12 = 5 \text{ min}$)

At what time did he set off for home ? 10 45

How long did he stop to repair a puncture ?
2 divisions 10 min
